## TRAXX ZERO CARBON OFFSETTING 2017

In 2017 BKV B.V. has offsetted **1.098,2 ton** carbon emissions (CO<sub>2</sub>) by using TRAXX Zero climateneutral diesel fuel

The carbon offset was realised with wind energy projects in the Maharastra and Rajastan regions in India. These projects have been selected by Climate Neutral Group. This certificate serves as proof that the amount of carbon emissions (CO<sub>2</sub>) mentioned above have actually been compensated with CO<sub>2</sub> credits in accordance with the Verified Carbon Standard (VCS). With this, BKV B.V., in combination with the CO<sub>2</sub> reduction through the combustion properties of TRAXX Zero, has reduced the CO<sub>2</sub> footprint of its machine and vehicle fleet to zero and fully neutralized its climate impact.
